The increased spread of COVID-19 has led to a need for business and other locations to decontaminate common surfaces and dispose of potentially contaminated materials. According to the CDC, coronavirus can remain active on a hard surface for days and can be difficult to detect.

Crystal Clean is proud to offer decontamination and disinfectant services for large and small square footage industrial, commercial, and public facilities. Our solution is a decontamination service following CDC advised procedures utilizing disinfecting agents recommended by the EPA and FDA. All impacted areas will be sprayed or wiped with a minimum of one minute of contact time. Post treatment, all areas will be sprayed and wiped with an additional disinfectant. Additionally, the company can manage transportation and waste disposal of any contaminated materials and waste byproducts.

Crystal Clean’s years of experience in waste disposal and emergency cleanup is a testament to our commitment to give you peace of mind when you enter a facility treated by us. Our decontamination team can be at your business with a quick turnaround time. Your safety is our top priority.

Crystal Clean only uses CDC approved and EPA registered disinfectants to decontaminate your surfaces. The cleaning products are chosen from the EPA’s List N, meeting the criteria to use against COVID-19.

All personnel involved in the decontamination process are fully outfitted with proper Personal Protective Equipment (PPE). An emphasis on correct and consistent use, as well as proper fit, means that personnel are fully protected.

Crystal Clean’s track record of waste disposal stands as proof of our ability to be a safe and reliable partner. Along with proper and compliant disposal, you will also be provided with all necessary documentation.
